

# **HOW TO MEASURE YOUR STAIRCASE FOR A STAIRLIFT**

## **MEASUREMENT CHART**

This should be a straight measurement from the nose of the top step to the floor, at the foot of the stairway. (see Figure 1)

### **B - Stairway Width inches**

You may find that your stairway width varies a little, over the length of the stairway. Record the measurement at its narrowest point. (see Figure 2)

### **C - Clearance at Bottom of Stairway inches**

A minimum of 24" is required for this measurement. (see Figure 1)

### **D - Clearance at Top of Stairway inches**

Measure the distance from the nose of the top landing to the nearest obstruction. (see Figure 3)

### **E - Number of Steps**

Include the top landing. (see Figure 2)

### **F - Mount on LEFT or RIGHT side?**

Determine from bottom of stairway looking up. (see Figure 2.)

\*Please also indicate if the staircase construction is "TIMBER" (wood) OR "CONCRETE".
